

Where do I want to be by the end of this period/year? What do I want to be doing?

What do I want/need to learn? Provide a specific description of the desired changes (e.g. skills to gain, knowledge to acquire, topics/themes/content to cover)	What do I have to do to achieve this? Some examples, a new/ongoing course, conference, self-development (like wider research or reading), coaching/mentoring, job shadowing	What resources or support will I need? Some examples, teaching staff support, library support, student advisor support, line manager, etc.	How will I measure success? Some examples, appraisals, course assessments, team feedback, tutor feedback	Target dates for review and completion Note that these need to be realistic/achievable
I want to write an excellent master's thesis and achieve distinction.	I need to plan ahead and stick to the timeline. A mixture of literature research and exploratory machine learning design will be applied as I want to explore and compare different models used on the same task.	For the literature research I will use the e-library together with Papertile. The code will be written on Google Colab to get access to GPU resources. The programming language will be Python together with important libraries.	Success will be measured by the mark of the master's thesis.	November 2025
I want to further improve my ability to build multi AI Agent systems.	Building on my current knowledge, I need to come up with additional use cases of how this technology can help to automate business processes.	I currently build AI Agent systems on the crewAI framework but might also consider alternatives. Support can be received by several options online, especially DeepLearning.AI.	Multi AI Agent systems that work and provide an impact can be sold to customers. Thus, I will measure my success with the revenue gained from agentic AI projects I work on.	End of 2025
I want to become better in project management.	I need knowledge in common project management frameworks and apply these in practice.	I need access to project management certifications, e.g., in SAFe or SCRUM.	Success is measured by obtained certifications and by getting the opportunity to lead first projects.	Q2 2026
I want to improve my ability to use Machine Learning models in business contexts.	I must conduct wider research on machine learning to understand which models fit to which problems.	I can use the e-library together with Papertile as research tool. Furthermore, I can use courses provides, e.g., by DeepLearning.AI.	I will use the feedback I get from my counsellors and supervisors at work as well as general project feedback for measurement.	Ongoing First checkpoint for results: Q2 2026
I want to get better in visualising data and results.	I need to become more proficient in creating dashboards to visualise data.	I want to use the ability to acquire certifications in Tableau and Power BI from my employer.	Success is measured by obtained certifications.	Q2 2026
I want to reach management level in technology consulting.	I need to develop a topic and be held accountable on developments of this topic in the future. The board must be confident that the topic is able to generate revenue and staff employees on projects. I need to stay informed about future technological updates of this technology.	I further develop the usage of AI Agents as explained. To keep informed about technological updates, I read academic literature, visit conferences and engage with subject matter experts.	The promotion to Manager is used as measurement of success.	Q3 2026
